

## Linearity Control

A1c-Cellular Linearity is a 5-level assayed linearity material used to assess instrument accuracy and verify the reportable range of the Hemoglobin A1c (HbA1c) parameter. It is the only commercially-available linearity/calibration verification material containing intact red blood cells.

### Complete Testing

Unlike competitive products, Streck's A1c-Cellular Linearity tests the entire reportable range of the instrument, including the lyse step.

### Ease of Use

- Instrument specific target values and expected ranges are provided for immediate instrument accuracy verification.
- A1c-Cellular Linearity is ready to run and does not require reconstitution, reducing the potential for errors and saving time.

### Convenient Packaging

- Cap-pierceable vials offer convenience of auto sampling for analyzers with those capabilities.
- Vials include barcodes for instruments capable of barcode scanning.

#### Typical Ranges

Level 1	2% - 4%
Level 2	6% - 9%
Level 3	10% - 13%
Level 4	14% - 17%
Level 5	18% - 21%

#### Stability: Store 2 °C - 10 °C

Closed-vial	105 Days
Open-vial	7 Days

### Assayed Instruments

- Abbott ARCHITECT® c4000, ci4100 (chemistry)
- Beckman Coulter® UniCel® DxC 600/800 Synchron®
- Bio-Rad® Variant II™, Variant II™ Turbo & D-10™
- Ortho-Clinical Diagnostics VIT-ROS® 5,1 FS, 4600, 5600
- Roche cobas INTEGRA®, 6000, c 311
- Siemens Dimension Series
- Tosoh G8
- Trinity Biotech Premier Hb9210™

### STATS®

Introducing Streck's updated Interlaboratory Quality Control program featuring online accessibility with enhanced real-time reporting and improved account management capability. Open to all customers at no charge, the Streck STATS program includes personalized, easy-to-read reports that detail performance, identify trends and facilitate real-time prompt corrective action. More information can be found at [www.streck.com](http://www.streck.com).

### Also Available

Streck also offers A1c-Cellular®, the first and only HbA1c control on the market with intact red blood cells. A1c-Cellular needs no reconstitution, which reduces the potential for human error due to incorrect pipetting during reconstitution, and is convenient to use.
